Taif Helly

Technical Project Manager & Scrum Master

Project Manager with a strong business oriented mindset and experience in leading technically complex initiatives involving multiple stakeholders. Proven ability to bring clarity and structure to ambiguous environments, bridge the gap between technology and business, and drive precise, high quality delivery. Experienced in planning, financial control, and quality management, with a strong focus on creating psychologically safe teams and establishing clear decision-making structures.

I have led cross-functional teams in both agile and traditional project environments, adapting ways of working to the size, complexity, and coordination demands of each assignment. This has involved combining structured planning and follow up with continuous dialogue within the team and with stakeholders, to ensure progress, quality, and on time delivery.

I have worked closely with both engineers and software developers, including at Scania, where I was responsible for translating technical requirements into day to day execution within highly complex environments. In parallel, I am deepening my technical expertise in full-stack development and CAD, which gives me a solid understanding of system architecture, 3D, and technical decision making in the teams I lead.

Previouse roles

Mar 2024- May 2025 Project Manager, Anticimex.

Jan 2023- Feb 2024 Assignment Manager/Scrum master, Scania.

Jan 2022- July 2022 Change leader/process owner, ITS Nordic

June 2015- July 2016 Event Manager, People Partner

Skills

Agila metoder (Scrum, Kanban, SAFe), Six Sigma & DMAIC, Lean management, ISO 9001, ISO 14001, ISO 27001, Blender (3D), Microsoft Office, Git & GitHub, Python, Power BI, HTML, CSS, JavaScript, React.

Key competencies

Project management, Scrum Master, Agile ways of working (Scrum, SAFe, Kanban), ITIL processes, Risk management, Business and process optimization, Cybersecurity, Six Sigma, Data analysis, Stakeholder management, Python, Jira, Process mapping, Vendor management, Budget planning, Leadership, Change management, MS Project, Cross functional collaboration

Technical Project Manager & Scrum Master +46 73 914 40 13 taifhelly@hotmail.com

Experience

March 2024 – May 2025 – Project manager, Anticimex Group

Responsibilities

In my role as a project manager, I worked at the intersection of IT, security, and business operations, with a strong focus on making cross functional initiatives work in practice. I created structure and direction in complex environments while remaining operationally close to the teams. I led projects with a clear connection to business objectives, conducted audits of global subsidiaries, and introduced Scrum to increase transparency, collaboration, and delivery capability.

Risk management was a central part of the assignment, where I worked proactively with manual penetration testing, Six Sigma FMEA, and ITIL based change and incident management to ensure stable and secure IT operations. I worked in a data driven manner using Power BI, Excel, and Python to improve reporting and decision support, and collaborated with developers on internal web tools using HTML, CSS, and JavaScript to automate manual processes. When progress stalled, I took responsibility for gathering the right expertise, creating alignment, and driving solutions to completion.

Areas of responsibility

• Introduced structured agile ways of working that improved project execution

• Strengthened the security posture through in depth vulnerability analyses and reduced cyber security risks

• Improved stakeholder communication through clear reporting structures and meeting frameworks

• Collaborated with developers to create internal web tools using HTML, CSS, JavaScript, and Python

• Led initiatives to resolve critical project blockers and minimize downtime

• Conducted audits of global subsidiaries to ensure compliance with Anticimex Group requirements and guidelines

Results

Implemented Scrum and agile ways of working that increased project efficiency and reduced delays.
Strengthened IT security through systematic risk management and improved cyber resilience.
Improved data visualization and reporting accuracy, providing better decision support at executive level.
Reduced project blockers and operational inefficiencies, leading to faster resolutions and more optimized workflows.

Keywords

Project management, Agile leadership, Scrum, ITIL processes, Business and process improvement, Cyber security, Six Sigma FMEA, Microsoft IaaS, Python automation, JavaScript, CSS, HTML, Version control with Git and collaboration via GitHub

January 2023 - May 2024 Assignment manager/Scrum master, Scania

Responsibilities

In this role, I worked closely with both R&D and production, taking responsibility for creating structure and driving progress in projects with multiple dependencies. I developed realistic project plans and used them as a shared governance tool aligned with strategic objectives. To strengthen collaboration, I implemented and customized Jira and translated Scrum and SAFe into ways of working that were effective even in production oriented environments.

I led a waterfall driven transformation project for Scania's fire trucks, with a budget exceeding 5 million USD. The assignment included supplier selection, price negotiations, and the implementation of technical solutions supported by CIM, FRAS, and OAS. The project was managed using Gantt based planning, with decisions made from a holistic perspective that balanced technical, financial, and operational considerations.

A core part of my work was to create alignment between design engineers, production, purchasing, SQA, and other stakeholders. When projects stalled, I took ownership of identifying blockers, assembling the right expertise, and driving the work forward. In close collaboration with production, I ensured that new materials and changes to production lines were introduced without disrupting daily operations, with a strong focus on stability and long term sustainable solutions.

Areas of responsibility

• Drove agile transformation by introducing Scrum and supporting other Scrum Masters, increasing efficiency both within the team and across production

• Acted as product and requirements owner towards international suppliers, ensuring compliance with detailed requirement specifications, validation testing, and measurement criteria

• Optimized supplier selection and achieved cost savings of approximately SEK 200,000 per week for Scania's global production

• Coached teams in obstacle management and established a transparent and adaptable way of working

• Conducted risk analyses and production process improvements that increased workflow efficiency

• Identified and resolved production blockers, improved project meeting structures, and streamlined archiving processes in collaboration with suppliers

Results

Improved workflow optimization and stronger stakeholder engagement increased delivery reliability across projects. Proactive management of production challenges significantly reduced project delays. Cost efficiency improved through strategic supplier governance and successful price negotiations. Collaboration between R&D and production was strengthened, resulting in higher productivity and smoother project execution.

January 2022 – June 2022 Change leader/process OWNER, ITS Nordic

Responsibilities
In my role as Change Leader and Process Owner, I took end to end responsibility for understanding how production actually operated in practice. I worked closely with the business to map business processes from start to finish, identifying bottlenecks, unnecessary manual handling, and dependencies that slowed down flow. Through detailed process mapping, I created a shared and transparent view of the current state and laid the foundation for improvement initiatives firmly grounded in daily operations.

To make improvement proposals clear and tangible, I visualized solutions using 3D tools and documented them in a way that was accessible to both technical and non technical stakeholders. I introduced digital and agile ways of working that simplified workflows and increased transparency across production, supported by Microsoft cloud solutions as enablers for the business.

In parallel, I was responsible for sustainability reporting in accordance with the GRI framework, ensuring that reporting not only met compliance requirements but also served as decision support for continued development. I also analyzed internal competencies and developed strategic recommendations for targeted training initiatives to support long term capability development.

Areas of responsibility

• Identified critical process gaps that resulted in a 45 percent reduction in production lead times

• Visualized improvement initiatives using 3D tools and fully documented proposed solutions

• Introduced digital and agile solutions to streamline workflows and improve efficiency

• Strengthened sustainability reporting through alignment with GRI standards

• Conducted competency mapping to support strategic workforce and capability development

Results
Through structured, business focused improvement efforts, production lead times were reduced by an average of 45 percent. Automation and clearer processes increased operational efficiency and eliminated unnecessary steps. Sustainability reporting improved in both quality and usability, while competency recommendations provided clear direction for future development initiatives.

June 2015 – July 2016 EVENT MANAGER, PEOPLE PARTNER

Responsibilities
Planned and delivered various types of events tailored to target audiences and specific needs, with responsibility for conducting risk assessments to ensure safety and quality. Worked closely with clients and actively involved them in the planning process to optimize execution. Ensured clear and timely communication to enable smooth coordination and successful delivery.

Areas of responsibility

- Developed structured event plans that enabled efficient execution and high customer satisfaction
- Conducted risk assessments to prevent and manage potential event related risks
- Streamlined workflows and documentation, simplifying the planning process
- Established clear communication channels to improve coordination and responsiveness

Results
Successfully delivered multiple high quality events, increasing customer engagement and satisfaction. Planning inefficiencies were reduced through the implementation of structured workflows and improved communication practices. Safety and quality standards were strengthened through comprehensive risk assessments, ensuring smooth and secure event execution.

Customer engagement, Workflow improvement

Employment

March 2024 – May 2025 Anticimex Group

January 2023 – February 2024 Scania

January 2022 – June 2022 ITS Nordic

June 2015 – July 2016 People Partner

Digital and technical skills development

I continuously develop my technical understanding within web development and system level engineering, with a focus on how digital solutions are designed, integrated, and maintained. This development spans frontend, backend, and databases and is a deliberate complement to my role as a project manager.

The purpose is to strengthen my ability to coordinate technical teams, engage in qualified dialogue with specialists, and make well informed decisions in projects with high technical complexity.

About me

I have a strong drive to understand how things work at a deeper level and to turn ideas into functional solutions. Outside of my formal role, I spend a significant amount of time on technical side projects where I combine programming, 3D CAD, and hands on building. I model, test, and iterate solutions in 3D to evaluate design, tolerances, and technical trade offs, and take them forward to prototype or finished functionality whenever possible.

This curiosity keeps me continuously up to date with new technologies and motivates me to actively explore new tools and methods. For me, learning is not about theory in isolation, but about building, testing, and improving, an approach that shapes both my technical projects and my leadership style.

Training and certifications

2019 – 2022
Industrial engineering & Management, Uppsala University of Technology.

2020

- Lean Six Sigma Yellow Belt.

2025

- PSM1, Professional Scrum Master I
- GIT, Git Essential Training
- Programming, Programming Foundations: Fundamentals.
- Microsoft Azure fundamentals (AZ-900) Cert Prep by Microsoft Press
- Web developer fullstack open source
